EDUCATION

North Carolina State University , Raleigh, NC, USA	
Doctor of Philosophy in Computer Science	08/2025 – 05/2030 (Expected)
• <i>Research Focus: Multimodal LLMs, Safety Alignment, LLM Efficiency</i>	
Seoul National University of Science and Technology , Seoul, South Korea	
Master of Science in Data Science	02/2023 – 08/2024
• <i>Research Focus: Continual Learning, Federated Learning</i>	
Bachelor of Science in Industrial Engineering	03/2017 – 02/2023
• GPA: 4.11/4.5 (Overall), 4.22/4.5 (Major)	
Northumbria University , Newcastle, England	
Bachelor of Science in Information Technology Management (Dual-degree)	04/2021 – 05/2023

WORK EXPERIENCE

AIBIZ Global , Seoul, South Korea	03/2025 – 05/2025
AI Engineer Intern, Data Science Team	
• Enhanced anomaly detection models for semiconductor manufacturing time-series data.	
• Developed automated root cause analysis pipelines leveraging LLMs.	
PeopleFund Company , Seoul, South Korea	07/2022 – 08/2022
Back-End Developer Intern, Department of Richtalk	
• Designed and implemented a real-time stock data pipeline using Apache Kafka.	
• Developed backend systems with Django, building RESTful APIs for web applications.	

PROJECTS

Anomaly Detection for Outgoing Quality Control of Camera Modules (LG Innotek)	03/2025 – 04/2025
• Developed a hierarchical graph representation learning framework to model local and global sensor interactions.	
• Engineered features from test logs using domain-specific filters and sensor calibration.	
Self-Training based Machine Learning Platform for SOAR (AhnLab)	02/2023 – 12/2023
• Improved a global CNN model via continual learning with locally evolving data.	
• Incrementally updated the tokenizer to accommodate newly generated web attack payloads.	
Real-Time Mechanical Equipment Failure Prediction in Smart Buildings (Kogen)	05/2022 – 10/2022
• Built a hierarchical federated learning framework to improve scalability and efficiency.	
• Developed a fairness-aware selective data acquisition algorithm via client learning curve estimation.	
Anomaly Detection through Analysis of Large-Scale Personal Access Logs (Samo CNS)	12/2020 – 09/2021
• Developed an unsupervised LSTM model by decomposing logs into keys and parameters.	
• Extracted personal access behavior patterns and labeled log data via statistical analysis.	

SELECTED PUBLICATIONS

[IEEE BigData] SPrint: Self-Paced Continual Learning with Adaptive Curriculum and Memory Replay – First Author
[IEEE BigData] OL4TeX: Adaptive Online Learning for Text Classification under Distribution Shifts – First Author
[Information Sciences] Historical Credibility for Movie Reviews and Its Application to Weakly Supervised Classification – First Author
[Sensors] Effective Model Update for Adaptive Classification of Text Streams in a Distributed Learning Environment – First Author
[IEEE TKDE] Modular Model Adaptation for Online Learning in Streaming Text Classification – First Author
[ICML, Under Review] Modality-aware Machine Unlearning for Multimodal Large Language Models – First Author
[ICML, Under Review] Leveraging Soft Prompts for Privacy Attacks in Federated Prompt Tuning – Second Author

HONORS

• Graduate Merit Award, North Carolina State University	08/2025
• Brain Korea 21 Fellowship, National Research Foundation of Korea	11/2023
• Innovation Talent Scholarship, Korean Ministry of Education	01/2023
• Excellence Paper Award, Korean Institute of Information Scientists and Engineers	06/2022

PROFESSIONAL SKILLS

• Languages & Frameworks	Python, Java, Kotlin, Django, Flask
• Data Analytics	PyTorch, R, TensorFlow, Flower, Keras, Pandas, NumPy, Matplotlib, LangChain
• Database Management	SQL, GraphQL, PostgreSQL, MongoDB, Redis
• Platforms & Tools	Git, Docker, Linux, AWS, Grafana, Spark, Kafka, Ansible, LaTeX
